

Glyphosate

Glyphosate is a fast-acting, systemic herbicide that affects plants down to the roots. Aquatic glyphosate effectively controls many emerged and floating-leaved plants. Glyphosate tends to offer slightly better control of some emerged plants than 2,4-D. Glyphosate is usually more expensive and will kill many terrestrial plants that it contacts along the pond bank. Noticeable effects of the herbicide should be visible within 5 to 7 days of application. The addition of a surfactant is usually necessary. Always refer to the product label for correct application instructions and precautions. The percentage of active ingredient located on the front of the label should be considered when comparing product brands. Also, a surfactant may already be included in some formulations. Product manufacturers can be contacted for more technical information or to find a local distributor. Below is a list of popular brands of glyphosate that are approved for aquatic use:

Brand Name	Manufacturer	Contact Number	Email
Accord Concentrate	Dow Agro Sciences	1-800-992-5994	www.dowagro.com
Aqua Neat	Nufarm	1-800-345-3330	www.nufarm.com
Aqua Pro	SePRO	1-800-419-7779	www.sepro.com
Aqua Star	Albaugh Inc.	1-800-247-8013	www.albaughinc.com
Aquamaster	Monsanto	1-800-851-5220	www.monsanto.com
Avocet	Phoenix Environmental Care	1-888-240-8856	www.phoenixenvcare.com
Eagre	Cerexagri-Nisso	1-800-438-6071	www.cerexagri-nisso.com
Eraser - AQ	Control Solutions Inc.	1-281-892-2500	www.controlsolutionsinc.com
Glyphos	Cheminova	1-888-548-6112	www.cheminova.us.com
Glypro	Dow Agro Sciences	1-800-992-5994	www.dowagro.com
Rodeo	Dow Agro Sciences	1-800-992-5994	www.dowagro.com
Shore Klear	Applied Biochemists	1-800-558-5106	www.appliedbiochemists.com
Touchdown Pro	Syngenta	1-866-796-4368	www.syngentaprofessionalproducts.com

Below is a list of potentially problematic plants observed in your pond on _____ that can be controlled with glyphosate:
