

Imazapyr

Imazapyr is a relatively slow-acting, systemic herbicide that affects plants down to the roots. Aquatic imazapyr offers better long-term control of several emerged plants than 2,4-D or glyphosate. Imazapyr has high soil volatility and may kill hardwood trees as well as other non-target plants adjacent to the plants treated. The addition of a surfactant is usually necessary. **An aquatic pesticide applicator permit is required to use imazapyr.** Contact your county extension office for information about obtaining this permit. Always refer to the product label for correct application instructions and precautions. Product manufacturers can be contacted for more technical information or to find a local distributor. Below is a list of popular brands of imazapyr that are approved for aquatic use:

Brand Name	Manufacturer	Contact Number	Email
Habitat	BASF	1-800-526-1072	www.vmanswers.com
Polaris AQ	Nufarm	1-800-345-3330	www.nufarm.com

Below is a list of potentially problematic plants observed in your pond on _____ that can be controlled with imazapyr:
