

Sodium Carbonate Peroxyhydrate

Sodium carbonate peroxyhydrate (SCP) is a very fast-acting, granular algaecide that is used to control blue-green algae. SCP breaks down algae through an oxidation process. SCP is often used prior to the application of chelated copper for algae more difficult to control, such as *Lyngbya*. In order for SCP to be effective, it must be delivered throughout the water column that is infested. Always refer to the product label for correct application instructions and precautions. Product manufacturers can be contacted for more technical information or to find a local distributor. Below is a list of popular brands of SCP that are approved for aquatic use:

| Brand Name | Manufacturer | Contact Number | Email |
|-------------------|---------------------|-----------------------|--|
| GreenCleenPRO | BioSafe Systems | 1-888-273-3088 | www.biosafesystems.com |
| Pak27 | Peroxygen Solutions | 1-336-707-1829 | www.peroxygensolutions.com |
| Phycomycin SCP | Applied Biochemists | 1-800-558-5106 | www.appliedbiochemists.com |

Below is a list of potentially problematic plants observed in your pond on _____ that can be controlled with sodium carbonate peroxyhydrate:
