

Triclopyr

Triclopyr is a fast-acting, systemic herbicide that is commonly used to control woody and broadleaf plants. Aquatic triclopyr also controls a variety of woody vegetation around pond banks and will not harm most terrestrial grasses along the pond bank. Another formulation of aquatic triclopyr also controls several emerged plants as well as the submersed plant, Eurasian water milfoil. The addition of a surfactant is usually necessary. Always refer to the product label for correct application instructions and precautions. Product manufacturers can be contacted for more technical information or to find a local distributor. Below is a list of popular brands of triclopyr that are approved for aquatic use:

Brand Name	Notes	Manufacturer	Contact Number	Email
Garlon 3A	Woody Plants	Dow Agro Sciences	1-800-992-5994	www.dowagro.com
Renovate 3	Woody and Emerged	SePRO	1-800-419-7779	www.sepro.com

Below is a list of potentially problematic plants observed in your pond on _____ that can be controlled with triclopyr:
